## EDUCATION

Hooghly Engineering and Technology College

08/2021 – 07/2025

B.Tech in Computer Science and Engineering - **CGPA - 9.02**

Hooghly, India

## PROJECTS

CodeSandbox [🔗 Github](#)

07/2025

**Tech Stack:** MERN, WebSocket, Tailwind, Vercel, AWS, Docker, Redis

- Built a secure, multi-language code execution platform supporting languages like C, C++, Python, Java, TypeScript, and JavaScript.
- Designed a queue-based architecture using **Redis** to manage concurrent code execution requests with isolation and resource control.
- **master, workers** run on **EC2** instances in Docker containers for sandboxing.
- Integrated **WebSocket** for real-time execution feedback and REST endpoints for code submission and result retrieval.
- Implemented security measures like **container isolation, execution timeouts, and memory limits** to prevent abuse and ensure system stability.

NeoChat [🔗 Github](#) [📺 Live](#)

08/2024

**Tech Stack:** MERN, WebSocket, Cryptr, Tailwind, Cloudinary, Vercel, AWS, Docker

- Developed a real-time chat web application with key features like **encrypted messaging, file sharing with download capability, and user-created channels and groups**.
- Implemented JWT-based secure **user authentication** and real-time **online/offline** status tracking.
- Integrated **debouncing for efficient user search** and displayed last message with timestamp for each contact.
- Utilized Cloudinary for seamless media storage and management.
- Hosted on **Vercel and AWS EC2 with Docker** for scalable and efficient deployment.

StudyNotion [🔗 Github](#) [📺 Live](#)

12/2023

**Tech Stack:** MERN, Tailwind, Cloudinary, Vercel, AWS, API Gateway, Serverless

- A full stack EdTech web app with three distinct user roles: **Student, Instructor, and Admin**.
- Developed features for Instructors to **create/manage courses**, Students to **purchase/review courses**, and Admins to **manage categories and handle administrative tasks**.
- Integrated **Razorpay** for payment processing and implemented robust user authentication with **email notifications**.
- Designed distinct dashboards for each user role and ensured a **fully responsive design** with media storage managed by **Cloudinary**.
- Hosted on **Vercel and AWS Lambda (serverless)** for scalable deployment.

## COURSEWORK / SKILLS

- |                                |                                     |                |                   |
|--------------------------------|-------------------------------------|----------------|-------------------|
| • Data Structures & Algorithms | • Database Management System (DBMS) | • OOPS Concept | • Web Development |
|--------------------------------|-------------------------------------|----------------|-------------------|

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, TypeScript, Java, C++, C

**Databases:** MySQL (SQL), MongoDB (NoSQL)

**Technologies/Frameworks:** HTML, CSS, ReactJS, Redux, Context API NextJS, NodeJS, ExpressJS, REST Api, AWS, Docker, CI/CD (GitHub Actions), Git, GitHub, Linux

## ACHIEVEMENTS

- Ranked **853rd** in **TCS CodeVita Season 12**.
- Developed **jwt-auth-utility** — a lightweight Node.js package for JWT token management.
- Developed **encryptor-e2e** — a Node.js library that provides easy end-to-end messaging by combining RSA key exchange with AES encryption for secure send/receive operations.
